(54) CODING METHOD, CODER, DECODING METHOD, DECODER, DATA COMPRESSOR, BIT STREAM GENERATING METHOD AND TRANSITION MACHINE GENERATING METHOD

(57)Abstract:

PURPOSE: To obtain the simple and inexpensive method and device for efficient compression/expansion of data expressed by binary decision.

CONSTITUTION: A binary decision model(BDM) 110 converts input data 100 into a binary decision series and gives the series to a probability estimate module(PEM) together with a context for each binary decision. The PEM 115 uses the context to generate a class for probability estimate with respect to each binary decision (PC class) and gives it to a coder 120 together with a discrimination result as to whether or not binary decision is in a high probability. The coder 120 generates a compressed data stream representing original data 100. The coder 120 consists of a selection transit mechanism having plural states and a state counter storing the current state.

LEGAL STATUS

[Date of request for examination] 29.03.1995

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 3017379

[Date of registration] 24.12.1999

[Number of appeal against examiner's decision]
